MEMORANDUM FOR:

FROM

:

Chief, Operations Support Branch, OL

SUBJECT

:

Reduction of Energy Use by the
Federal Government

We will attempt to reduce the use of petroleum by closer scrutiny of requests for vehicular support and by consolidation of cargo movements whenever possible. It should be noted however that previous energy conservation guidelines have already resulted in programs to promote the use of car pools and government provided shuttle transportation; therefore, little additional savings can be realized. Operational requirements for a quick reaction supply capability occasionally preclude use of the most effective energy measures; however, these will be closely monitored and granted only after careful scrutiny.

STAT

[] - Comments from [] LSD, re Mr. Carter's energy memo.

STAT

"The previous energy crisis, coupled with our continuing awareness of the need for energy conservation, has prompted us to constantly evaluate our motor pool operation and our courier activities. To that end, we have streamlined our operations to only essential activities and continually review our programs to abide by the intent and the letter of President Carter's program to reduce energy consumption."
